

Inactivated oil emulsion vaccine

For the immunization of chickens
against Reovirus Diseases (3 strains)

► COMPOSITION

REOMUNE® 3 is an inactivated vaccine containing three avian reoviruses including strain S1133 (Tenosynovitis pathotype), strain 2408 (Malabsorption syndrome pathotype) and strain SS412 (Distinct serotype from the S1133 standard-type reoviruses).

Reovirus SS412 is a causative agent of proventriculitis and malabsorption syndrome in broilers. The viruses contained in **REOMUNE® 3** are non-cloned isolates. The adjuvant is a proprietary formulation that provides uniformly high serological titers of maximum duration.

► INDICATIONS

REOMUNE® 3 is indicated to aid in the prevention of disease caused by avian reoviruses of the classical S1133 and 2408 serotypes and the variant serotype SS412. Breeder vaccination provides maternal antibodies to progeny to aid in the prevention of Tenosynovitis (viral arthritis) and the Malabsorption syndrome including feed passage, brittle bone and proventriculitis.

A prime with live tenosynovitis (reovirus) vaccine is recommended at least four weeks in advance of administration of **REOMUNE® 3**.

► ADMINISTRATION AND DOSAGE

REOMUNE® 3 is for use in healthy chickens at least 18 weeks of age and at least four weeks prior to the onset of lay, administered to chickens by the **subcutaneous route**. The dose is 0.5 ml (1/2 cc) per bird. The preferred injection site is under the skin on the back of the neck.

► STORAGE

Store vaccine between +2°C and +8°C or 35°F and 45°F

- Protect from light
- Do not freeze

► PACKAGED

- 1,000 doses in each 500 ml bottle
- 10 x 1,000 dose bottles/box
- 20 x 1,000 dose bottles/box
- 25 x 1,000 dose bottles /box

WARNING

This product contains oil based adjuvant; accidental injection into a human may cause a serious localized reaction. Seek expert medical attention immediately.
