

**Live freeze-dried
vaccine 9R strain**

**For active immunization against *Salmonella*
Gallinarum / *Salmonella* Pullorum infections and as an aid
on the active immunization against *Salmonella* Enteritidis**

► COMPOSITION

CEVAC® S. GALLINARUM contains live *Salmonella* Gallinarum strain (strain 9R), naturally attenuated and non-pathogenic for chicken, in freeze dried form.

► INDICATIONS

For the active immunization of healthy chickens from 4 weeks of age against infections due to:

- *Salmonella* Gallinarum,
- *Salmonella* Pullorum.

This vaccine can also be used for chicks to stimulate active cross protection against infections caused by other *Salmonellae* of group D such as *Salmonella* Enteritidis.

► ADMINISTRATION AND DOSAGE

One dose (0.2 ml) per animal.

The vaccine must be **injected subcutaneously**.

Birds can be vaccinated once, or preferably twice, with an interval of at least 4 weeks, ideally 6-8 weeks. The first vaccination can be done from 4 weeks of age. The vaccine should be given at least two weeks before transfer of the birds to the production area.

► STORAGE

- Store vaccine between +2°C and +8°C or 35°F and 45°F
- Protect from light
